Aerospike for Developers

Objectives

- Successfully install an Aerospike development cluster
- Develop an application in C#, Java or Go using Aerospike as the data store

Course Modules

- Architecture and Data Model
- Developer setup
- Key-value operations
- User defined functions (UDF)
- Queries
- Aggregations

Before you begin

Before you begin:

- Download aerospike-developer.zip
- Extract it to a local directory/folder with sub folders:
  - answers
    The complete solution to the exercises
  - exercise
    Lab exercises for each module
  - book
    Notes on each module in PDF format. These notes form a useful reference, and will help you through the lab exercises
